**Biblioteka CIOP-PIB** jest biblioteką specjalistyczną, dysponującą bogatym księgozbiorem z dziedziny bezpieczeństwa i ochrony zdrowia człowieka w środowisku pracy. Interdyscyplinarny charakter tematyki sprawia, że zasoby biblioteki reprezentują niemal wszystkie dziedziny nauki, zarówno humanistyczne jak i techniczne, a także obszernie zbiory o charakterze uniwersalnym - słowniki, encyklopedie, leksykony i poradniki.

**Biblioteka oferuje pomoc w wyszukiwaniu informacji i opracowywaniu zestawień bibliograficznych** z problematyki dotyczącej ochrony człowieka w środowisku pracy, na podstawie krajowych i zagranicznych źródeł informacji. Biblioteka umożliwia dostęp ze swoich stanowisk komputerowych w czytelnicy do baz danych subskrybowanych przez Instytut, zobacz **Bazy zasobów elektronicznych**.

Ze zbiorów bibliotecznych mogą korzystać wszyscy zainteresowani, również osoby spoza Instytutu.

Biblioteka funkcjonuje w strukturze Ośrodka Informacji Naukowej i Dokumentacji

**Biblioteka jest czynna od poniedziałku do piątku w godz. 9.00 - 15.00, IIp. pok. 225.**

Ze zbiorami Biblioteki można zapoznać się korzystając z **ELEKTRONICZNEGO KATALOGU** (informacje) oraz poprzez wyszukiwarkę **PRIMO**.

#### ■ Księgozbiór Biblioteki obejmuje:

- ▶ **wydawnictwa zwarte** - książki i materiały informacyjne
- ▶ **czasopisma polskie i zagraniczne**
- ▶ **prace naukowo-badawcze**

■ **Biblioteka posiada specjalistyczne piśmiennictwo polskie i obcojęzyczne z następujących dziedzin:**

### Abstract

A study of work interference with family (WIF) among managers is described, contrasting four clusters of countries, one of which is individualistic (Anglo) and three of which are collectivistic (Asia, East Europe, and Latin America). Country cluster (Anglo vs. each of the others) moderated the relation of work demands with strain-based WIF, with the Anglo country cluster having the strongest relationships. Country cluster moderated some of the relationships of strain-based WIF with both job satisfaction and turnover intentions, with Anglos showing the strongest relationships. Cluster differences in domestic help were ruled out as the possible explanation for these moderator results.

Published: 2011

[View Journal Impact](#)

#### Abstract

Objective: The aim of this cross-sectional exploratory study was to investigate destructive managerial leadership in the hotel industry in Sweden, Poland, and Italy in relation to psychological well-being among employees.

Methods and Participants: 554 questionnaires were collected from employees in all occupational groups within hotels. The Copenhagen Psychosocial Questionnaire (COPSOQ) measured working conditions, particularly iso-strain or high work demands combined with low control and poor social support, and psychological well-being, defined in terms of mental health, vitality, and behavioural stress. Items adapted from the Global Leadership and Organisational Behaviour Effectiveness (GLOBE) research program questionnaire measured autocratic, malevolent, and self-centred leadership styles. Differences in ratings between countries were estimated, as well as the relationship between destructive managerial leadership on an organisation level and employee psychological well-being on an individual level. The relationship between destructive leadership and psychological well-being among employees was adjusted for employees' reported iso-strain.

### Abstract

**Objectives:** Europe's nursing shortage calls for more effective ways to recruit and retain nurses. This contribution aims to clarify whether and how social work environment, teamwork characteristics, burnout, and personal factors are associated with nurses' intent to leave (ITL).

**Methods:** Our sample comprises 28,561 hospital-based nurses from 10 European countries. Different occupational levels have been taken into account: qualified registered nurses (n = 18,594), specialized nurses (n = 3957), head nurses (n = 3256), and nursing aides and ancillary staff (n = 2754).

**Results:** Our outcomes indicate that ITL is quite prevalent across Europe, although we have found some differences across the countries depending on working conditions and economic situation. Quality of teamwork, interpersonal relationships, career development possibilities, uncertainty regarding treatment, and influence at work are associated with nurses' decision to leave the profession across Europe, notwithstanding some country-specific outcomes. A serious lack of quality of teamwork seems to be associated with a 5-fold risk of ITL in 7 countries. As far as personal factors are concerned, our data support the hypothesized importance of work-family conflicts, satisfaction with pay, and burnout. A high burnout score seems to be associated with 3 times the risk of ITL in 5 countries.
